

St Davids, Artane

- Our Junior and Senior Infant classes were learning shapes. In our Shape and Space lessons we discussed sides, corners, curved edges and length. We coloured shapes, used peg boards to create shapes, made shape monsters through shape tiles, discussed and created patterns using shapes.

The four infant classes then came together to use our bodies to make the shapes. The boys were very good at deciding which shape we needed to make and were quick to get involved and create the shapes making corners, long and short sides and creating curved edges with their bodies.

Describe your favourite part of doing this project

- The children really enjoyed the kinesthetic aspect involved in this activity and it reinforced their learning. With over 80 Junior and Senior Infants featured in the photos, the atmosphere in the hall was incredible.

A group of children in a gymnasium are lying on the floor to form various geometric shapes. In the foreground, a group of children is sitting in a semi-circle. Behind them, several other groups of children are lying on the floor to form shapes like a large 'L', a circle, and a square. The gymnasium has a wooden floor with white and red lines.

Shapes, Shapes, 1, 2, 3...
